

PUCK AND PALLET SYSTEM SOLUTIONS

We carry a broad range of twin track and stand alone pallet handling conveyors, as well as standard and custom puck solutions.

Our pallet solutions are great for any products that need to be moved through work stations and weigh up to 66lbs. Pallets come standard with RFID tags to ensure that you have constant monitoring of your product.

Pucking and de-pucking systems are also a breeze with our conveyors—even for custom vertical applications where magnetic chain and pucks are needed.
