

SCALABLE ROBOTICS

Code-free, CAD free, point and click programming for industrial robotics

We help companies to overcome the last barriers for robotic welding:

- **Minimal Training:** New welders can be trained in **less than a day**, and training can be done by another welder
- **10x Faster Programming:** Appropriate for **small to large batch sizes**, where new daily programming is needed – new programs in **minutes, no CAD needed**
- **Minimal Fixturing:** Scalable's **automatically generated Production Tuning** adjusts for part variation or rough fixturing
- **Low Cost:** Less than the cost of training your welders in a robot programming language

Our package combines **AI, 3D Vision** and **Process Rules** to enable non-experts to program robots code free. The robot is equipped with the sensor inputs and process knowledge it needs, so an operator can teach a task to the robot in the same way he would teach another human, just by **pointing to where the process should be done and letting the robot figure out the details.**
